Has transforming activity. Inactivates, with E6-AP ubiquitin-protein ligase, the human TP53/p53 tumor suppressor protein by targeting it to degradation. Binds and targets human MUPP1/MPDZ protein to degradation. Those two functions presumably contribute to transforming activity (By similarity). Interaction with human FBLN1 protein also seems to be linked to cell transformation. SUBUNIT: Forms a complex with E6-AP ubiquitin-protein ligase which interacts with human P53. Binds to human FBLN1 and MPDZ (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Transcriptional transactivator. Binds double stranded DNA. Has transforming activity. Inactivates, with E6-AP ubiquitin-

"Biologic properties and nucleotide sequence analysis of human papillomavirus type 51.";
J. Virol. 65:4216-4225(1991).
-1- FUNCTION: Transcriptional transactivator. Binds double stranded DNA (By similarity).
-1- SUBCELLULAR LOCATION: Nuclear matrix-associated (By similarity).
-1- SIMILARITY: Belongs to the papillomaviruses B6 protein family.

              Oncogene; Transcription; Transcription regulation; CHAIN 1 158 Protein E6.

    -!- FUNCTION: This protein has transforming activity in vitro.
    -!- SUBCELLULAR LOCATION: Nuclear matrix-associated (By similarit)
    -!- SIMILARITY: Belongs to the papillomaviruses E6 protein family

Biophys. Res. Commun. 296:962-969(2002). FUNCTION: Transcriptional transactivator. Bindladity) Has transforming activity. Inactivates, DNA (By similarity). Has transforming activity. Inactivates, E6-AP ubiquitin-protein ligase, the human TP53/p53 tumor suppressor protein by targeting it to degradation. Binds and targets human MUPPI/MPDZ protein to degradation. Those two functions presumably contribute to transforming activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Interaction with human FBLN1 protein also seems
